MAKE A NEW BASE STATION POSITION

1. Turn on the Base Station by holding the Push Button for three seconds, until you hear 6 beeps, then release.

2. When the satellite number reaches 13 or more and TX appears on the screen, press and hold the Push Button again until the bar on the screen loads fully (a count of three) to enter the menu.

Press and hold the Push Button for a three-count on any screen to select the option that is currently displayed.

3. Press the Push Button (one press at a time) to cycle through menu options until the screen reads SET POSITION.

4. Hold the Push Button for a count of three. CREATE NEW will appear.

5. Hold the Push Button for a count of three to allow the Base Station to Save the new Position.

This Save process can take up to two minutes.

6. When complete, the Base Station will begin a series of beeps.

ATTENTION: Touch nothing until RESULT POSITION OK appears and all beeps have stopped.

7. Raise the Base Station on the Prism pole 10-12 feet to its operational height.

Success! Open the Turf Tank App and create your New Location, New Plan, and New Field!
